

Projection System ZUE G 1

04.02.16

How to use it

Turn on

With the black control box (see left), you can turn on both the projector and the rack components (black cupboard on wheels) → Press the key **ON**

Turn off

→ Press the key **OFF**: All components will be turned off. The projector needs some time to turn off. Until this is done, you cannot turn the projector on again.

Presentations

You can only connect two machines to the projector at the same time (computer, laptop, etc). One connection is analog (VGA), the other digital (HDMI). The picture quality is better with HDMI. Some computers need a special adapter for HDMI connection. This adapter is not part of the presentation system: you have to bring it yourself.

Connect a Computer to the Projector

Computer with analog connection: → Press the key **LAPTOP VGA**

Computer with digital connection → Press the key **LAPTOP HDMI**

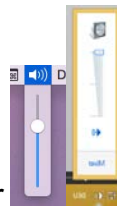

Sound Connection

VGA connection → also connect the green audio cable
HDMI connection → no cable needed

Volume Control

All available volume control modulators must be used:

- General settings of the computer
- Volume setting of the program you are using
- **VOLUME** button on the black box (see picture above)

Projection System ZUE G 1

04.02.16

Play Movie from CD, DVD or Blu-ray disc

Open the rack door, put the disc into the player of the rack.

Press key **BLU-RAY**.

Start the movie with the Blu-ray remote control (be careful, there are two remote controls, one for the Blu-ray player, and one for the beamer, which is not needed normally).

TV

Press key **PLAYER** on black box.

TV Channels

You can only switch between channels with the keys **CH+** and **CH-** on the black box. The list of channels is limited to the ones subscribed to by ETHZ (list on window sill).

Interrupt Sound and Picture

Any kind of presentation (Computer, slides, TV, movie) can be interrupted by pressing the key **AV MUTE**.

Projector (hanging from ceiling)

The projector has a resolution of 1280x800 (not Full HD) and has a luminous intensity of 7000 ANSI-Lumen. The projector must never be touched, it should only be controlled via black box. The remote control for the beamer should not be used.

Rack

Blu-ray Player

This is the only rack component you ever use.

Bottom Drawer of Rack

Contains a technical documentation, the remote control for the beamer (not needed, as you should use the black control box) and the remote control for the Blu-ray player.
